

AimBetter and Partnerships

Get yourself the disruptive solutions tool that
NOC down all other monitoring tools.

AimBetter 
Today for a Better Tomorrow

Daily Health Check

Every day (Monday to Friday), the AimBetter support team runs health checks on the alerts received and lets you know about any issues.

Initiated Tests

As part of the service, we take additional, proactive steps, to ensure that your system is in top health.

- We test for behavior that is irregular but does not shut down your system. We identify problems that might become major issues that affect your servers.
- The tests provide insights into your servers' behavior to help you have a clear picture of what is going on.
- You can request a report on alerts, deadlocks, queries, and exceptions.

Technical Support

The support team will do everything to provide you with professional services in the following areas:

- Answers to questions about the AimBetter system.
- Providing a professional explanation about the alerts received and their meaning.
- Training and orientation in the system. You can download the user guide [here](#).
- Adding additional users to connect to our system and/or application.
- Connect you to our mobile app so you can receive notifications wherever you are located. The app is available for download at [Google Play](#) or [Apple Store](#).
