# Premium Security

On top of AimBetter's already secure-by-design architecture, we offer additional security conditions for customers with more stringent compliance requirements who want complete separation from the general environment.

1- Exclusive Database in our data center for storing their performance data and analytics, fully encrypted.

2- Exclusive App server service user for accessing the Database.

3- Exclusive API address, inaccessible to other companies' users. For example, instead of logging in to the AimBetter system through the general URL app.aimbetter.com, the premium security customer from the company "ABC" will log in through the URL abc.aimbetter.com. In addition, this exclusive domain can have IP restrictions.

4- An exclusive separated server, hosted in Azure France, where the AimBetter data center is hosted or in the customer's data center.

These premium security conditions imply additional infrastructure and maintenance costs and require an on-demand quotation related to the customer's specific needs.
